

Investing in uncertain times

What you can consider doing today

Presented by:
Jason Frizzell
Registered Representative TIAA-CREF

Today's agenda

- Market volatility
- What you can do
- Investment concepts
- Risk tolerance
- Asset classes and asset allocation
- Diversification
- Mutual funds, stocks and annuities
- Tools and resources

- COVID-19 is driving greater-than-normal volatility
- Potential slowdowns in consumer spending
- Temporary layoffs
- Possible decline in economic growth

Things to consider avoiding

- Reacting from a place of fear
- Trying to time the market
 - To benefit from a market timing strategy, you have to guess right **74% of the time**
 - and, you have to guess the right time to sell **AND** the right time to buy

Importance of staying invested

Ending wealth values after a market decline

Past performance is no guarantee of future results. This is for illustrative purposes only and not indicative of any investment. An investment cannot be made directly in an index. ©Morningstar. All rights reserved.

Keeping a long-term perspective

- The U.S. economy was strong going into this pandemic
- Historically, markets are resilient
- Recovery traditionally follows a downturn

Past performance does not guarantee future results.

What is an emergency fund?

- Reserve of liquid assets that can easily be converted into cash
- Standard practice is to have six months' day-to-day living expenses
- Should be invested with a short-term time horizon in mind

Job Loss

Car Repairs

Medical Emergencies

Home Repairs

Vet Bills

Diversify your investments

20-year portfolio performance 1999–2018

Past performance is no guarantee of future results. Hypothetical value of \$1 invested at the beginning of 1999. Assumes reinvestment of income and no transaction costs or taxes. An investment cannot be made directly in an index. © Morningstar. All rights reserved. Diversification is a technique to help reduce risk. It is not guaranteed to protect against loss.

- Investment risk
- Volatility
- Diversification and asset allocation
- Expenses matter

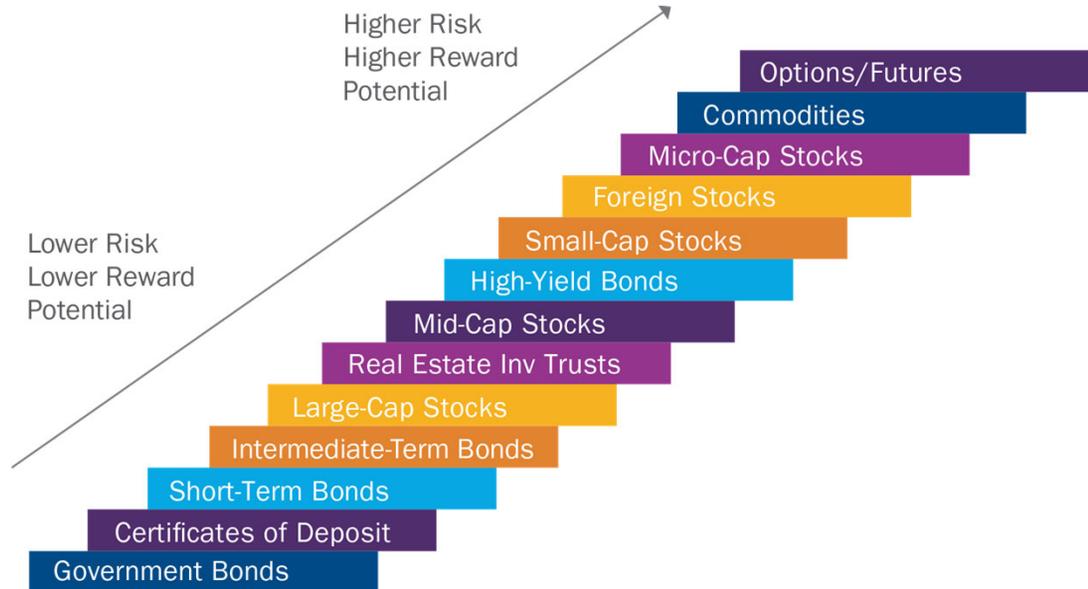

Understanding your risk tolerance

What's your risk level?

- Conservative
- Moderately conservative
- Moderate
- Moderately aggressive
- Aggressive

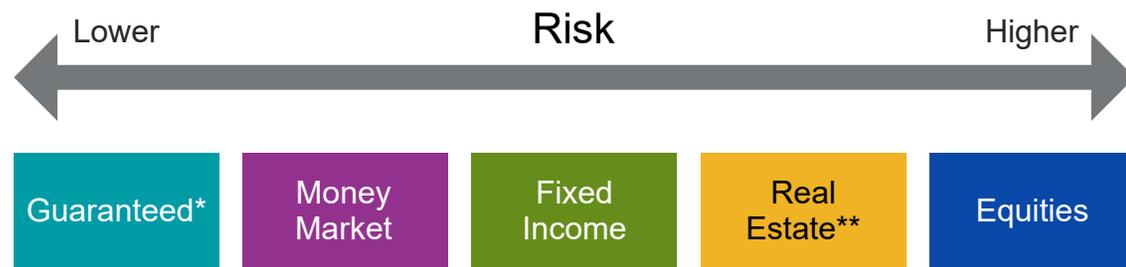

What's your time horizon?

There are inherent risks associated with investing in securities, including loss of principal. The greater the risk, the more likely you can lose money. An investor's needs and the suitability of an investment should be carefully considered prior to purchase.

Asset classes

- Guaranteed
- Money market
- Fixed income
- Real estate
- Stocks (a.k.a. equities)

There are inherent risks in investing in securities. Past performance is no guarantee of future results. In addition, investment returns and principal value will fluctuate so your accumulation, when redeemed, may be worth more or less than the original cost.

* Guarantees are based on the claims-paying ability of the issuer.

** The real estate industry is subject to various risks including fluctuations in underlying property values, expenses and income, and potential environmental liabilities.

Asset Allocation: Diversifying your portfolio

You can diversify your portfolio to avoid big investment value fluctuations by:

- Dividing your investments into stocks, bonds and cash equivalents
- Diversifying by sector also (retail vs. energy vs. etc.)

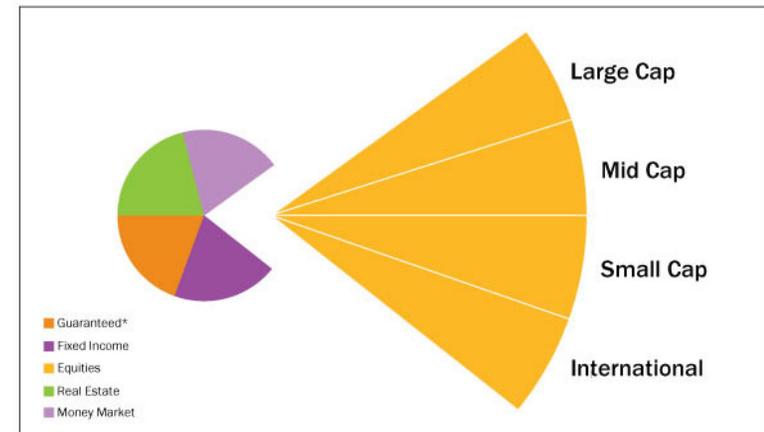

As you get closer to retirement, you may want to shift more investments to safer options.

- Examples: Bonds, cash and a guaranteed account

Understanding diversification

- Spreads risk among different asset classes
 - Guaranteed*
 - Fixed Income
 - Equities
 - Real estate
 - Cash/Money market
- Potentially reduces overall portfolio volatility
- To diversify, allocate assets...
 - **Across** asset classes
 - **Within** asset classes

Diversification does not guarantee against losses.

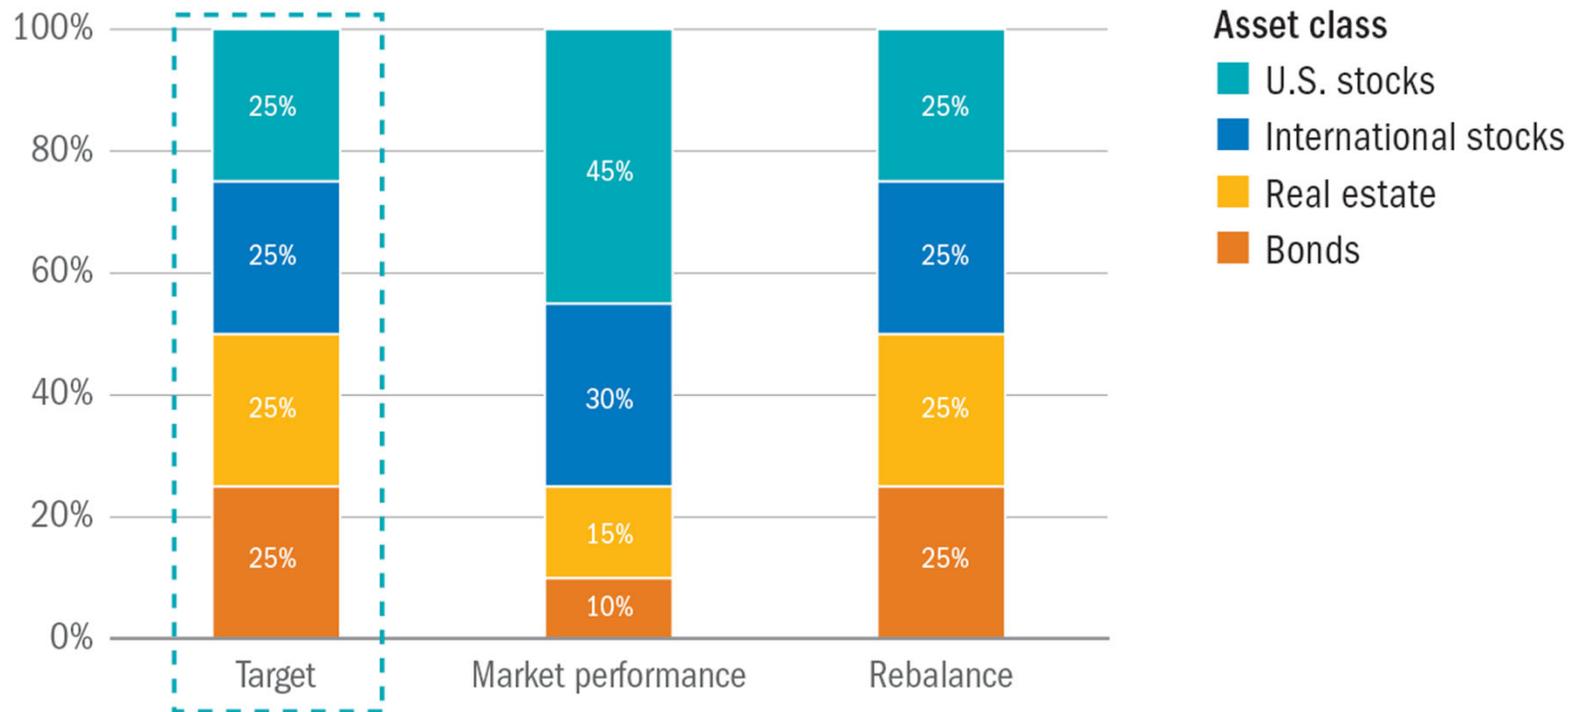

* Guaranteed by the claims-paying ability of the issuer.

Reallocation and rebalancing

Asset allocation strategies used to restore your portfolio targets

- Reallocation: change how your contributions are being invested
- Rebalancing: bring your asset allocation back

Rebalancing does not protect against loss or guarantee that an investor's goals will be met.

- A stock is a piece—or share—of something valuable.
- Stocks are also known as equities.
- Stocks are volatile investments—their value can vary a great deal in a short time period.
- BUT that's looking at too big of a picture!

Planning to retire soon?

If you're not on track you can:

- Work a little longer
- Plan to spend less in retirement
- Reduce or push out other goals
- Consider the impact of Lifetime Annuity Income
- Utilize the Retirement Income Illustrator tool

Best practices to consider

- Maintain an emergency fund
- Make sure your portfolio is diversified*
- Stick with your plan
- Reevaluate your risk tolerance
- Review your retirement account investments

* Diversification is a technique to help reduce risk. It is not guaranteed to protect against loss.
